

CV-Checker Program

The [Checker Program](#) runs some simple checks on your databases of drivers, vehicles, streets, etc.

It can:

- help fix simple problems,
- speed-up your system if it is running slowly,
- and save you space by compacting files to make them as small as possible.

You should use it every month or two, or if you have problems opening files, or if your system is running slowly.

> How to Run it

Manually from within Windows:

To run the Checker, follow these steps:

- 1) Take a Backup of your CabVista data and store it in a safe place
- 2) Exit out of CabVista (if you are running a multi-user system, do this on ALL your PCs)
- 3) Go into the folder '[C:\CabVista\Program](#)' and run the program '[CV-Checker.exe](#)'.
Wait until it finishes.
- 4) Then re-start CabVista again

Or Run from the Windows Desktop:

If you have a 'CV-Checker' shortcut on your Desktop, you can replace Step 3) above by double-clicking on the shortcut instead.

> Reminder

There is now also a reminder of how to use the [CabVista Checker Program](#) within the main CabVista program ... just click on "[Check my Data](#)" on the main screen to see the reminder.
