

CabVista: How can I install it on a new PC or laptop ?

If you buy a new PC or laptop, and wish to transfer your existing CabVista system over to it, then there are 2 ways you could do it:

Method 1:

- Install CabVista on the new PC, and then use "**Check for Updates**" to ensure you have the latest version.
- Then take a Backup of your data on your old PC (by clicking on "**Backup my Data**" on the main screen and following the instructions) - this puts all your data into a single file called "**CVData.Bak**".
- Then **restore** this file into your new PC (by going to "Management & Reports -> Backup or Restore -> Restore Data. Click "Change folder to restore from" and choose the place where you stored "CVData.Bak" [for example, your USB memory-stick] ... then click "Restore").

-- or --

Method 2:

An alternative way, which you may prefer because it is simpler in many ways, and which would automatically keep all your earlier jobs and data, would be simply to copy the whole "**CabVista**" folder (found on the C-drive of your current PC) over to the C-drive of your new PC.

Then add a shortcut on your Windows desktop, pointing to the file "**CabVista.exe**" which you will find in the CabVista program folder ("**C:\CabVista\Program**"). We can explain the adding of the shortcut in more detail, if you decide to go this route.

If you have any questions or problems, just ask.
